

Kamaldeen Seriki

Senior AI Engineer & Backend Architect

Location: Akoka, Lagos, Nigeria **Phone:** +2349064882112

Email: kamalseriki49@gmail.com

Links: [GitHub](#) | [LinkedIn](#)

Professional Summary

Senior Backend & AI Engineer with over 5 years of experience architecting high-impact distributed systems. Expert in building scalable backends, reliable data pipelines, and intelligent decision-support tools using Python, Dotnet c#, TypeScript and Node.js. Proven track record of owning full-stack product lifecycles, alongside hands-on Web3 experience developing and deploying Solidity smart contracts. Passionate about solving complex logistics, payment routing, and infrastructure allocation problems, while leveraging AI to optimize development velocity and system performance.

Technical Skills

- **Core AI & ML:** Predictive Modeling (Time-Series), Recommender Systems (Content & Collaborative Filtering), Optimization Algorithms, NLP (LLMs, RAGs), Computer Vision.
- **Backend Engineering:** Python, Django, FastAPI, Node.js, Dotnet C#, Microservices, Docker, Celery, Redis.
- **Web3 & Blockchain:** Solidity, Smart Contracts, ERC20, NFTs, DeFi protocols.
- **Domain Expertise:** Healthcare Workforce Planning, Creator Economy Monetization, Geospatial Logistics, Payment Infrastructure.
- **Integrations:** Paystack (Split Payments), Glovo LaaS (Logistics), Google Maps API.

Web3 & Blockchain Experience

- **DeFi & Token Infrastructure:** Developed and deployed core smart contracts, including a foundational defi-stablecoins system, custom erc20 tokens, and an nfts-24 project using Solidity.
- **Decentralized Applications (dApps):** Engineered a smart-contract-lottery-24 protocol and a decentralized crowdfunding platform (fund-me-24) to handle secure, trustless state changes and transactions on-chain.

Work Experience

Mid-Senior Backend Developer | Izifin Technologies Limited

Oct 2025 – Present | Hybrid/Lagos

Izifin focuses on engineering high-performance fintech solutions and intelligent backend server networks.

- **Merchant Intelligence & AI Automation:** Developed intelligent chatbots for automated order reconciliation to streamline merchant operations. Engineered a dynamic digital storefront and utilized Grafana to maintain rigorous product reliability standards.
- **Scalable API Architecture:** Designed high-throughput C#/.NET Core APIs, facilitating seamless external integrations and driving rapid deployment of mission-critical platform features.
- **"IziSentinel" Security Infrastructure:** Created a sophisticated fraud detection system using unsupervised machine learning and real-time anomaly analysis to protect financial ecosystems and user trust.
- **Cloud Infrastructure & DevOps:** Owned mission-critical cloud environments and automated CI/CD pipelines to optimize release velocity and ensure high system availability for global end-users.
- **Database Optimization & Engineering:** Enhanced SQL Server and PostgreSQL performance through advanced query tuning and architectural migrations, significantly reducing latency and boosting system scalability.
- **Observability & Transaction Monitoring:** Implemented a robust observability framework and transaction pipeline that mitigated alert fatigue via precise metric thresholds, enabling proactive resolution of system issues.

Lead AI & Backend Engineer | Qoryx (Healthcare Workforce Intelligence)

Oct 2025 – Jan 2026 | Remote/Lagos

Qoryx is an AI-powered staffing platform that predicts risks and matches healthcare professionals to shifts.

- **Architected "SmartMatch" Recommender Engine:** Built the core matching algorithm that pairs healthcare professionals (Doctors, Nurses, Phlebotomists) with open shifts by analyzing skills, security clearances, live availability, and geospatial distance.
- **Developed "ForecastPro" Predictive System:** Engineered a predictive analytics engine that flags staffing gaps up to 72 hours in advance, providing explainable reasoning to Care Managers to prevent service disruptions.
- **Built "OptimisePro" Decision Support:** Designed the backend logic for simulation tools that suggest optimal staffing fixes, allowing organizations to visualize the impact of roster changes before applying them.

- **Backend Infrastructure Ownership:** Built the majority of the platform's backend using **Django** and **Python**, handling complex multi-tenant architecture for Organizations, Professionals, and Client/Patient profiles.

Lead AI & Backend Engineer | Pusheat (Food Creator Marketplace)

Nov 2024 – Oct 2025 | Remote/Lagos

Pusheat is a "TikTok-for-food" marketplace enabling creators to sell meals directly through viral video content.

- **Video Content Recommendation System:** Designed and deployed the AI ranking algorithms for the main video feed, curating creator content to maximize engagement and conversion (orders).
- **"Bites" Gamification & Wallet Architecture:** Engineered the backend logic for the "Bites" loyalty system, tracking user engagement (likes, shares, downloads) to dynamically calculate and apply discounts at checkout in real-time.
- **Creator-Centric Payment Split:** Implemented a complex **Paystack** integration to automate instant split payments between food creators, logistics partners, and the platform.
- **Automated Logistics Dispatch:** Integrated **Glovo LaaS** to handle on-demand delivery, building a system that auto-assigns riders based on food prep windows and customer location.

Machine Learning Engineer | Spacial Nova (Acquired by Terrahaptix)

Mar 2022 – Feb 2023 | Lagos, Nigeria

- **UAV Computer Vision:** Served as Lead MLE, developing lightweight Deep Learning models for plant recognition and object detection optimized for edge deployment on Unmanned Aerial Vehicles (UAVs).
- **Acquisition Success:** Technical contributions to scalable model architecture played a pivotal role in the company's acquisition by Terrahaptix.
- **Edge Optimization:** Reduced model inference latency to enable real-time processing on hardware-constrained aerial devices.

CTO | Backend & Machine Learning Engineer | Octave Inc (MelodyAI)

Feb 2019 – Feb 2022 | Lagos, Nigeria

- **LLM Chatbot Development:** Implemented an advanced RAG-based chatbot using Large Language Models to answer complex data analysis queries, securing grant funding for the project.
- **Data Analysis Engine:** Directed the development of an AI-powered engine capable of deriving actionable business insights from heterogeneous datasets.
- **API Performance:** Refactored legacy backend systems, significantly improving API response times and system reliability.

Backend/ML Consultant | Perzsi

Feb 2022 – Feb 2023 | Lagos, Nigeria

- **Automated Scraping Infrastructure:** Crafted a resilient backend integrated with an AI-driven scraping engine to acquire business data for advertising.
- **Admin API Development:** Spearheaded the development of real-time administrative APIs for scraping oversight and role management.

Education

B.Sc. Mechanical Engineering

University of Lagos | *Feb 2018 – Sep 2024*

Certifications & Awards

- **Deep Learning & NLP Specializations** (Coursera/DeepLearning.AI)
- **3rd Place:** AI4D Yoruba Machine Translation Challenge (Zindi)
- **Notable Projects:** Staffing Prediction Models, Viral Content Recommenders, Fraud Detection (98% F1-Score), Motion Detection Systems.

Community

- **Google Developer Student Club:** Active Member & Contributor.
- **Data Science Nigeria (Unilag AI Club):** Mentor and Technical Lead.
- **Machine Learning Lagos:** Project Lead
